

Commercial Air Conditioners 2021/2022

Fan Coil Unit &
Air-Cooled Chiller &
Water-Cooled Scroll Chiller

Established in 1991

TICA is a professional enterprise specialized in R&D, manufacturing, sales and services of environment cleaning and thermal energy utilization.

Vision

Strive to be the international leading integrated system and service provider in clean environment and utilization of thermal energy

Mission

Persist to maximize the value for customers through innovative technology and provide clean environment in order to improve the quality of life

TICA is a national high-tech enterprise, a single leading enterprise cultivated by the Ministry of Industry and Information Technology, a national brand cultivation enterprise of the Ministry of Industry and Information Technology, and a vice chairman member of China Refrigeration and Air-conditioning Industry Association. It has a national-recognized enterprise technology center, an enterprise academician workstation, and a post-doctoral research workstation. Its projects cover Beijing Bird's Nest Stadium, Water Cube, Wukesong Indoor Stadium, PetroChina, Sinopec, State Grid, Nanjing Panda, Hangzhou Xiaoshan International Airport, Hainan Airlines Group, Shangri-La Hotel, Manila Ocean Park, Abu Dhabi Al Muneera, SM City in Philippines and Unilever, etc.

TICA is also the outstanding provider of central air conditioners for China's subway networks and has successfully served nearly 70 key subway lines in major cities such as Beijing, Shanghai, Guangzhou, Shenzhen, Chengdu, Suzhou, Hangzhou and Tianjin. TICA is a professional supplier and service provider in China that specializes in system integration of clean environment. While for microelectronics, hospital operating rooms, biopharmaceutical industry and other professional purification areas, each achieving a market share of over 40%.

Air To Water Split Heat Pump Chiller

Nomenclature

Health

Radiation Heating for Healthier Life

Comfortable Temperature Field

Heating with Traditional Air Conditioner

The temperature gradually decreases from top down. When the ceiling temperature reaches 30°C, the floor temperature is only about 10°C.

Temperature pattern of air conditioning system

Warm for head and cool for feet

Uncomfortable
Increasing the risks of rheumatism and arthritis

Split heat pump Heating

The temperature gradually decreases from bottom up. The temperature field is distributed evenly because of even heat dissipation and large heat dissipation area of the whole floor.

Temperature pattern of floor heating

Cool for head and warm for feet

Complying with human thermal engineering rules
Improving blood circulation and metabolism of the body

Perfect Humidity Range to Make Your Home More Comfortable

Traditional Fluoride-System Air Conditioner	Split heat pump Air Conditioning System
<p>When cooling, the refrigerant directly evaporates indoors at a low temperature, the air outlet temperature is very low and uncomfortable.</p> <p>Condensate water is generated when the low temperature surface of coil unit is exposed to the hot air. As a result, the indoor air is excessively dehumidified (indoor humidity of about 35%).</p>	<p>When cooling, the water temperature can be set and is generally over 7°C, which not only guarantees the cooling effect, but also dehumidifies the air properly, keeping the indoor humidity within the most comfortable range (about 50%). In addition, the air outlet temperature is more approximate to the human body temperature, letting you feel cool but not cold.</p>

Fast Cooling/Heating and Constant Room Temperature to Make You More Pleasant

After the air conditioner is powered on, the compressor rapidly starts and the unit operates at a high frequency to reach the set indoor temperature promptly. In addition, the system regulates the output of ODU and indoor water supply flow/temperature in real time based on the change of indoor load, to control the room temperature accurately. With Split heat pump full inverter air source chiller (heat pump), the room temperature fluctuates $\pm 1^{\circ}\text{C}$, resolving the "unstable temperature" issue of traditional air conditioners and making you feel more comfortable.

Wide Adaptability for Cooling and Heating

Model	Operating range:
Cooling	-15°C to 55°C
Heating	-25°C to 25°C

Quiet Enjoyment and Better Household Experience

The unit uses 9-tier noise reduction technologies to effectively reduce the noise when the unit is started, runs in full load, and runs in partial load. Three silent modes provide more all-day noise reduction solutions for household life.

living room

TIPS

When floor heating is used in a radiation manner, because no moving parts such as fans and motors are installed indoors, nearly no noise is generated and family members can enjoy a peaceful space.

Energy Saving

Upgrade 1
(Mitsubishi)

All DC inverter compliant enhanced vapor injection compressor
Match the running frequency smartly based on the load change in the air side.

Upgrade 2

(Grundfos of Denmark)

High-efficiency inverter screening water pump
Regulate the system water flow smartly based on the load change in the air side.

Upgrade 3

(Shibaura of Japan)

High-efficiency anti-interference inverter motor
Match the air flow smartly based on the load change in the air side.

Ons-stop configuration upgrade

Multi-inverter for Performance Assurance

Air to water split heat pump chiller upgrades product configuration to the top-level industry standard at one stop. With the all DC inverter compliant enhanced vapor injection compressor as its core of energy saving, it also adopts the high-efficiency anti-interference inverter motor and inverter screening water pump, to regulate running status in real time, improve energy efficiency effectively.

Three-in-one for Powerful Force

All DC inverter + Rotor compressor + enhanced vapor injection

The cooling capability is not attenuated at 40°C, and the heating capability is not attenuated at -20°C.

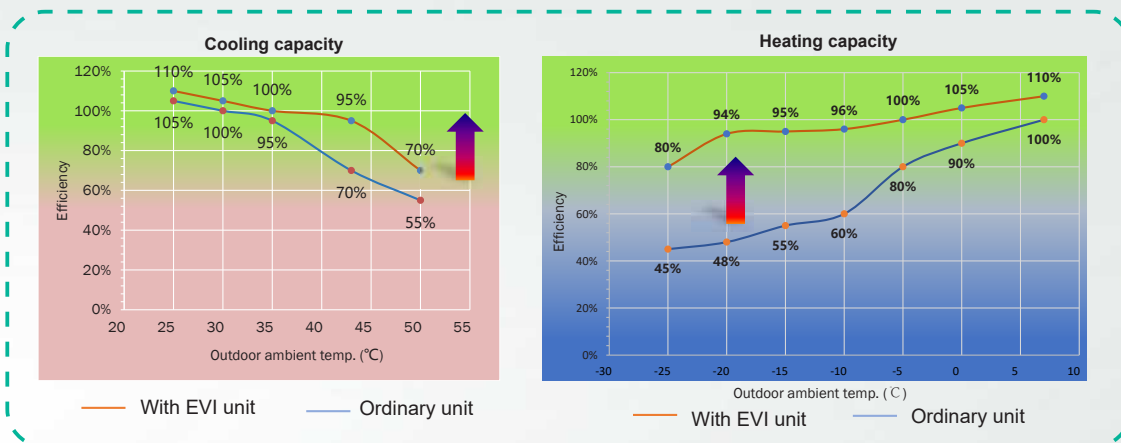

All DC inverter vs. fixed-speed compressor
Automatically regulate the unit frequency to meet the indoor capability requirements to the maximum extent while guaranteeing energy saving.

Electric heater is not required

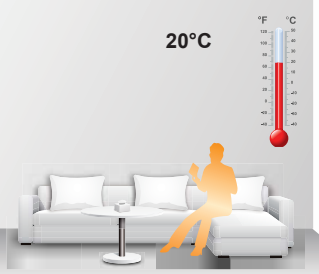

Enhanced vapor injection vs. common system
TICA's original all-condition enhanced vapor injection technology is used in Air to water split heat pump chiller, fully improving the unit running capability of cooling and heating. It easily implements cooling and heating in extreme conditions, with energy efficiency 20% higher than common units.

No electric auxiliary heat is needed in low-temperature environments in winter, saving more energy.

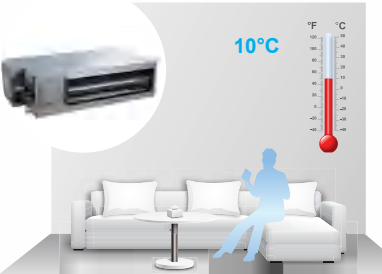

Superpower Heat Storage for Long-term Heat Preservation

Air To Water Split Heat Pump Chiller taking water as the cool/heat carrier, provides a large heat capacity and powerful heat storage capabilities, beneficial for long-term heat preservation indoors. One hour later after the unit is powered off, the indoor environment temperature decreases by 2°C only.

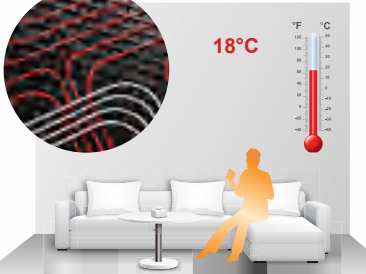

20°C

Room with normal heating

10°C

One hour later after the unit is powered off
Room heated by traditional air conditioner

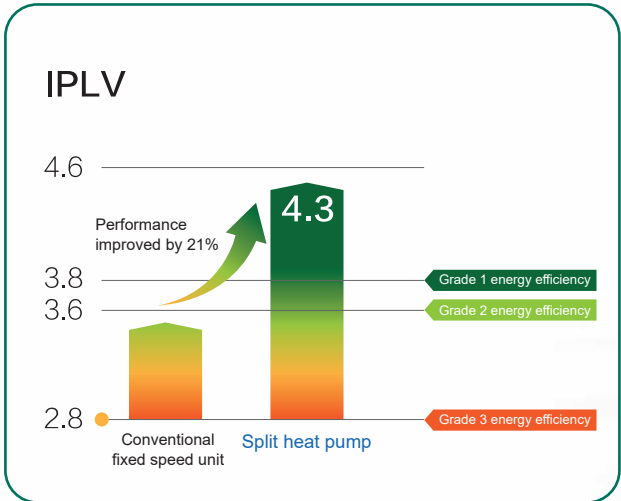

18°C

One hour later after the unit is powered off
Room heated by Split heat pump

Excellent Energy Efficiency

Air To Water Split Heat Pump Chiller provides an excellent energy efficiency level, with the integrated part load value (IPLV) reaching 4.3, far exceeding the national level-1 energy efficiency and 21% higher than regular fixed-frequency units. It passes the national energy saving product certification and saves more running costs for customers.

TIPS The IPLV considers the energy efficiency index when the unit runs in different loads, reflecting energy saving of air conditioners more objectively.

Heat Pump Heating for Lower Costs

Thanks to its higher comfort level, The floor heating system has become a common selection of high-end users. However, many users are deterred by higher running costs of electric boilers and wall-mounted gas boilers. Air to water split heat pump chiller can be directly connected to the floor for heating, with higher energy efficiency and 30% running costs of wall-mounted gas boilers. In addition, it features water-power separation, security, and no pollution. Therefore, Split heat pump has got the favor of more and more household customers.

Electric boiler

Large power consumption, easy to form water scale, electric heating tube prone to aging, potential leak of power supply

Wall-mounted gas boiler

Low combustion efficiency, failed to associate with the cooling part of air conditioner, potential leak of toxic gas, explosion risk

Cost	Split heat pump	Wall-mounted Gas Boiler
Heating area	100 m ³	
Unit load	80 W/m ²	
Heating duration	90 days * 24 h/day	
Total heating load	17,280 kW	
Energy form	Power	Gas
Average energy efficiency	4.3	0.93
Energy consumption	4018 kWh	1950 m ³
Unit price of energy	0.5 yuan/kWh	3 yuan/m ³
Annual cost	\$309	\$900

Note: The unit price of energy listed in the table is the average price of peak power and valley power in a day. The actual unit price of energy prevails locally.

Clean

Full-effect Purification for Clean Air

TICA adopts the air conditioning + purification + fresh air system to remove hazardous substances such as PM2.5, formaldehyde, and allergens and deodorize air, providing you with a clean indoor environment.

Multi-tier purification

The air conditioner is equipped with the residential-specific purifying fan coil unit, not only providing perfect silent effect but also configuring an air return purifier to effectively remove hazardous substances such as PM2.5 and formaldehyde.

Physically Absorbing PM2.5 for Zero Ozone

96% efficiency for filtering PM2.5 (circulated for 120 minutes)

The exclusive electrostatic technology keeps electrostatic discharge on the filter material for a long term, 10 years at most.
The 100% fiber material is green and moisture-resistant.

Chemically Removing Formaldehyde

90% efficiency for filtering formaldehyde (circulated for 60 minutes)

The exclusive technology of chemically removing formaldehyde distributes capturing medicaments on the surface of filter layer evenly, implementing fast reaction with the aldehyde group.
The technology is secure and highly-efficient, without the secondary release problem caused by excessive absorption of aldehyde group.

Fresh Air System, Supplying Forest Oxygen at Home

Scared to live in the newly decorated house due to high formaldehyde content?

Scared to smoke at home for fear that passive smoking does harm to kids and elders?

Hard to breathe because the air is stuffy with windows closed for a long term in winter?

Feel the room smell bad at night?

TICA professional household fresh air system increases the oxygen in your home!

- It integrates fresh air, air discharge, haze removal, and heat recovery. Fresh air filters PM2.5 at 95% efficiency for the first time. Dirty air is discharged while fresh air is supplied, which keeps air fresh indoors all the time.
- An intelligent control system is configured to display the concentration of PM2.5, formaldehyde, carbon dioxide, etc. in real time, making good air visible.

Refrigerant for Low-Carbon Living

R410A is an internationally-recognized environment-friendly refrigerant. It is stable, nontoxic, high-performance, chlorine-free, and non-destructive for ozone layer. In addition, the unit is driven by clean power energy, without the need of coal, oil, or gas consumption, releasing no hazardous gas or waste material. The clean and low-carbon refrigerant leads a healthy life.

Peace of Mind

Multi-tier Anti-freezing for More Secure Water System

The unit implements anti-freezing detection based on the water flow, water temperature, and refrigerant temperature and provides three-tier anti-freezing procedures to prevent local freezing of water pipelines in winter. In addition, the unit adopts a separated structure to install the water system indoors, offering higher anti-freezing protection and more peace of mind.

Water pumping

Heating

Electric heating

Separated structure brings you peace of mind

Fast Defrosting for Efficient Heating

Intelligent Defrosting

The unit intelligently determines whether to defrost based on the outdoor environment temperature and running status, to implement defrosting when frost exists and heating when frost does not exist, prevent mistaken defrosting, and improve heating efficiency to the maximum extent.

Powerful Defrosting

In severe conditions such as high humidity and low environment temperature, the unit automatically regulates to optimize defrosting effect, enhance heat exchange efficiency, and actively improve efficiency through powerful defrosting.

Comprehensive Security Protection for More Reliable Unit Running

The unit provides various hardware protection and software protection for control functions, to forecast faults timely and regulate running status for unit reliability.

Problem forecast

Running regulation

Security protection

Power supply protection

Compressor overload protection

Protection of too low outlet water temperature

Discharge high pressure protection

Protection of too high outlet water temperature

Low water flow protection

Fan overload protection

Discharge high temperature protection

Suction low pressure protection

Mini Body for More Flexible Installation

Single-fan design

Compact high-quality efficient heat exchanger design

The small body carries large capabilities, breaking the complex space pattern. The unit body is only 850 mm high, convenient for installing in narrow space such as bay window, more flexible, and more fashionable.

Intelligence

Varieties of Control

Air to water split heat pump chiller is equipped with a full-touch LCD controller to easily implement integrated control of air conditioning and floor heating.

Integrated Design for Worry-Free Operation

Adopting integrated design, the unit integrates water system accessories into the IDU and incorporates moving parts of the water system into the unified control of unit program. Such design not only reduces the working hours and expenses of field installation, but also improves reliability of the whole system.

Expansion tank

Modular Inverter Air-cooled Scroll Chiller

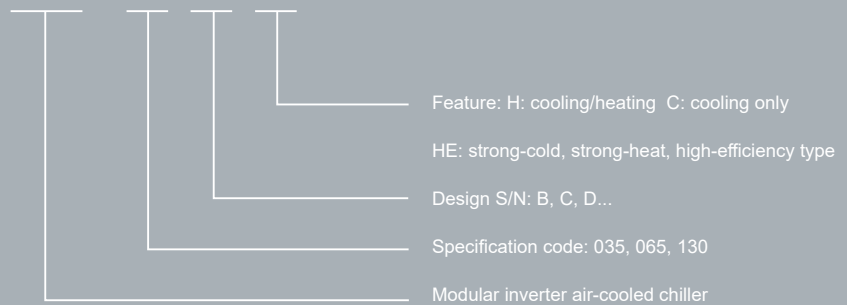

CE

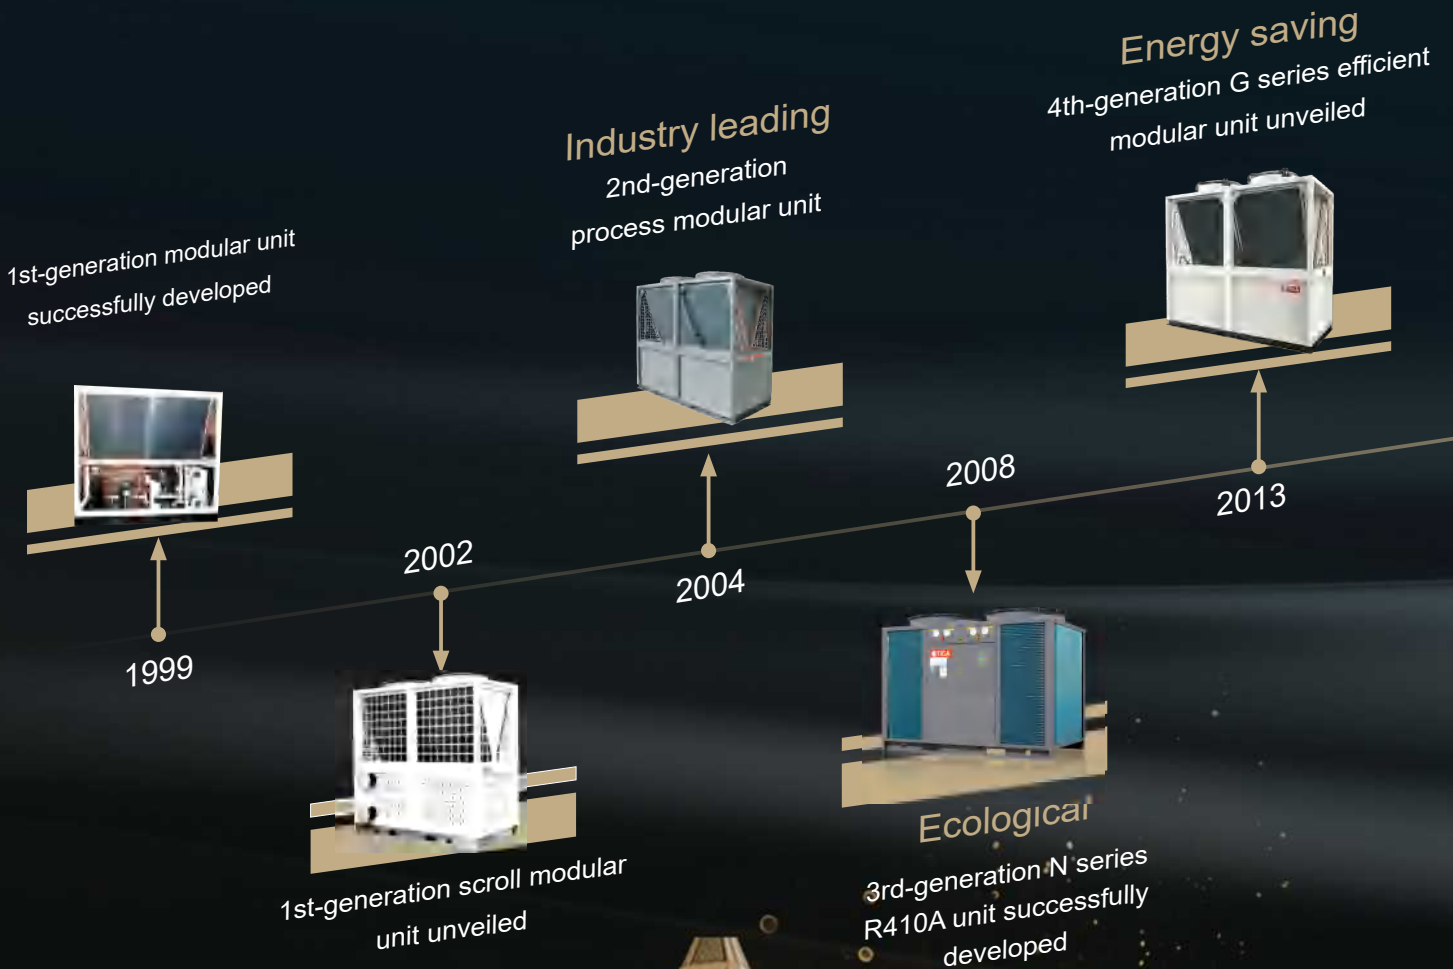

Nomenclature

Modular Inverter Air-cooled Scroll Chiller

TCAV 065 B HE

TICA modular unit represents **two decades** of technological capability accumulation

Modular Inverter Air-cooled Scroll Chiller

V-FORCE full-operating
condition inverter
Upgraded 7th-generation units, leading
an energy saving revolution

Extensive lineup

6th-generation X series units unveiled
Solutions to meet special process and
sanitary conditions, normal indoor use,
cooling only, low temperature and strong
heat, four-pipe, full heat recovery

2014

2016-2019

2020

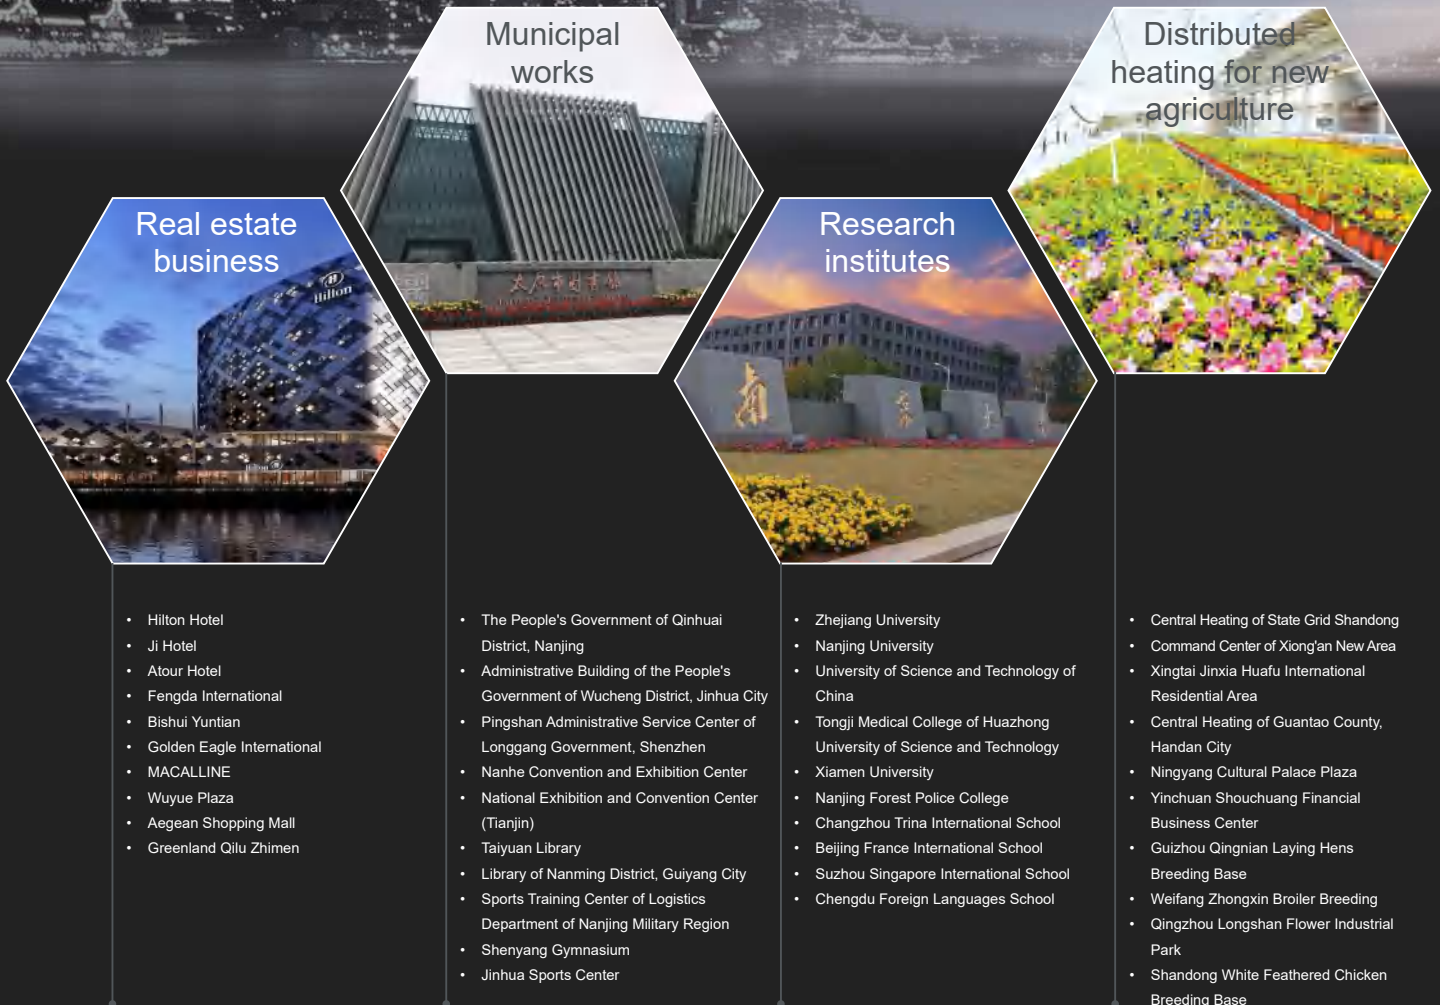

Targeted marketing

5th-generation H/J
series modular units
Unparalleled comfort/processing

Cases

Common occasions

Quiet and comfortable/heating at low temperature/full heat recovery

Process application

Industrial temperature control/cooling only/process cooling

Electronic purification

Laboratory test

Excellence in **All** Aspects

Operate under all conditions

Operate at -26°C to +55°C
Performance improved by 20% at extreme conditions

Full inverter energy saving

Dual grade-1 IPLV for cooling and heating
IPLV comprehensive energy saving rate up to 26%

Various application scenarios

Solutions to meet normal indoor use, special process and sanitary conditions, cooling only, low temperature and strong heat, etc.
Full application scenario alternative

Simple but Stunning

Concise structure

- Full concealed design
- Four-way air return
- Ivory white coating

Simplified system

- Single compressor design
- Optimized refrigerant pipeline

User-friendly experience

- Full series compatibility of modular unit
- Easy-to-use control panel (optional), one-key operation
- Data control, convenient after-sales service

Operate under all conditions

With years of experience in developing and designing process air conditioners, TICA has successfully integrated EVI and full inverter technologies and made a breakthrough in the operation of modular units.

Operating temperature in cooling mode: -20 to +55°C
 Operating temperature in heating mode: -26 to +55°C
 Performance improved by 20% at extreme conditions

Dynamic control of condensation pressure

Efficient inverter fan and 15%-100% stepless capacity control to match changes in the system pressure in real time.

Inverter EVI technology

Inverter adjustment under partial load ensures efficient operation;
 EVI technology ensures strong cold and strong heat at extreme conditions.

Self-developed drive control program

German stepless sine-wave permanent magnet motor driving technology provides computing at 8000 times per second and double filtering to ensure that power disruption is removed at all frequencies.

Full inverter energy saving

V-FORCE modular units use full inverter design so that the partial load efficiency is greatly enhanced.

With patented control technology, multiple units are able to operate at the same time in a stable, efficient and balanced manner.

Reaching the national EEI level 1 in cooling and heating mode

IPLV is above 4.55 in cooling mode
exceeding the national EEI level 1 (4.0)

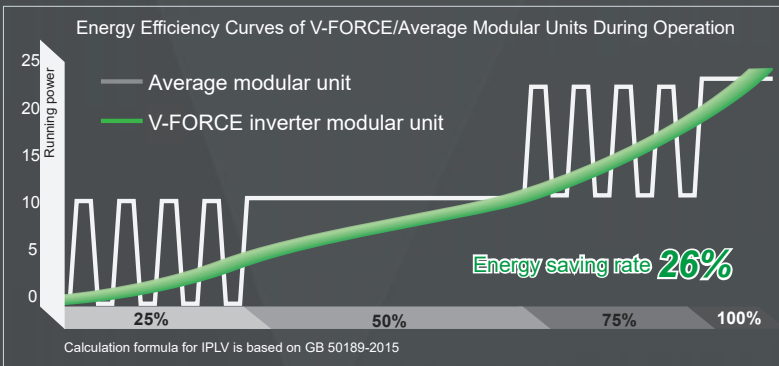

IPLV is above 3.10 in heating mode
meeting the national EEI level 1 for heating of the new national standard

*The cooling performance complies with GB 19577-2015

*The heating performance complies with GB 37480-2019

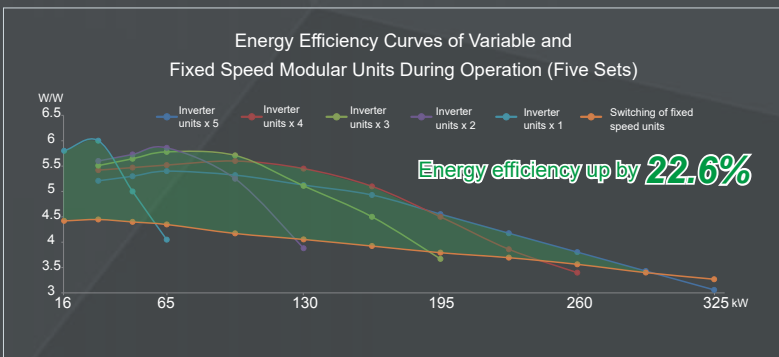

National EEI level 1

Inverter operation and accurate output

The unit is equipped with a large-capacity inverter compressor that supports 15%-100% stepless regulation. The unit has a smooth performance curve. In addition, it performs well under partial load and the compressor does not start or stop frequently.

Balanced control to ensure energy efficiency

Partial load operation prioritized
When multiple modules are combined, the frequency of each compressor is intelligently controlled, so that the system operates in an energy-efficient area in a balanced manner.

Various application scenarios

Comfort

Silent and environmentally friendly
Extremely comfortable

The noise can be lowered by 6-10 dB(A) in silent mode
The noise can be as low as 50 dB(A) in partial load

Process

Perennial cooling
Stable operation

Operate stably in cooling mode at the ambient temperature of -20 to +55°C
Precise control of water outlet temperature

Strong heat

Low temperature and strong heat
EVI and enhanced efficiency

Heat at even -26°C (water outlet temperature at 40°C)
The water outlet temperature can reach 55°C
(when the ambient temperature is above 0°C)

Simple but Stunning

Concise structure

- ◆ Vulnerable parts fully concealed to facilitate installation
- ◆ Four-way air return and 45% more windward area to ensure more efficient heat exchange and reliable structure
- ◆ TICA classical "ivory white" coated metal sheet framework

Simplified system

- ◆ Creative single compressor design featuring inverter and EVI technologies
- ◆ Optimized refrigerant pipeline to reduce welding costs

User-friendly experience

- ◆ Installation – full series compatibility of modular unit
- ◆ Usage – easy-to-use control panel (optional), one-key operation
- ◆ After-sales service – standard memory module and ten-year data management

- ★ Notes:
- The nominal cooling capacity and nominal cooling consumption power are tested at the rated water flow, water outlet temperature of 7°C, and outdoor dry-bulb temperature of 35°C.
The nominal heating capacity 1 is tested at the rated water flow, water outlet temperature of 41°C, and outdoor dry-bulb temperature of -12°C and wet-bulb temperature of -14°C.
The nominal heating capacity 2 is tested at the rated water flow, water outlet temperature of 45°C, and outdoor dry-bulb temperature of 7°C and wet-bulb temperature of 6°C.
 - About 6% loss caused by system pipelines, water pumps, valves, and dirt after unit installation shall be considered for the cooling (heating) capacity in actual applications.
 - Parameters listed in the above tables are for a single module. Up to 16 modules can be used together.
 - The control accessory box needs to be purchased separately, which contains the wired controller, wired controller communication cable, user manual, temperature sensor, etc. The box content may change. Please refer to the actual factory configurations.

Operating Range

Ambient temperature range in cooling mode	°C	-20 - 55
Ambient temperature range in heating mode	°C	-26 - 55
Cooling return water temperature	°C	10 - 25
Cooling water outlet temperature	°C	5 - 20
Heating return water temperature	°C	25 - 50
Heating water outlet temperature	°C	30 - 55

Modular Fixed Frequency Air-cooled Scroll Chiller

CE

Product Line

Classical Modular Chiller(TCA-X)

R410A CLASSICAL MODULAR UNIT

The new generation of X series environment-friendly modular air-cooled unit is based on 20 years of experience in R&D and design, which is greatly improved in aspects of the structure, system and microcomputer control technology, providing wider operation range of refrigeration and heating, and higher adaptability to applications with requirements on comfort and technology. There are basic modules of any combination available for different models, including 66 kW, 100 kW, 130 kW, and at most 16 modules can be connected in parallel, providing combination products of 66 kW ~ 2080 kW.

Excellent Capacity

Units of the same model or different models can be combined freely. Each group can combine up to 16 modules.

Free master Module Design

Any single unit can operate as the master once connected with the wired controller. It overcomes the problem that the whole system would fail to work properly when the fixed master unit malfunctions.

Intelligent Defrosting Technology, Non-stop When Defrosting

The unit control system can determine whether defrosting is necessary according to the ambient temperature in heating mode, evaporating temperature and running time; when defrosting conditions are met, the unit will automatically activate the defrosting program to complete defrosting within a short time and provide heating operation efficiency up to over 90% , ensuring the optimum heating capacity and high EER.

Intelligent Air Volume Regulation

The shared duct system is adopted to greatly expand the operating range. The single-module unit can automatically increase or reduce fans based on the ambient temperature to achieve optimal matching between air volume and load and deliver outstanding performance.

Intelligent Energy Regulation Technology

Unique intelligent energy regulation technology in multi-module combination ensures that each module loads or unloads a refrigerant circuit before loading or unloading other refrigerant circuits in the single module, thereby providing higher efficiency, stability and IPLV.

Widely Operation Range

Low temperature cooling
5°C~48°C

High temperature heating
-15°C~48°C

Compact Design And Less Occupied Area

Unique and compact structure results in small size and occupied area, significant reductions in installation space and cost; the unit is compact and easy to install. A 130KW unit covers floor space of only 2.42m², a 50% reduction compared to its equivalents.

Famous Hermetic Scroll Compressor

Unit adopt famous brand hermetic scroll compressor, which is high-efficient, energy saving and operates stably, with low noise, slight vibration and long service life.

V-Shaped Condenser

The v-shaped condenser has used an integral reinforcing metal frame, internal thread and triple anti-frosting features (patented design of open-window hydrophilic aluminum foil + bottom elevated + one-way valve), providing higher structural stability and corrosion resistance; with heat exchange efficiency improved through full use of heat exchange area, low tendency to dust accumulation and frosting in winter, low loss of pressure, smoother drainage and higher reliability.

Efficient Shell And Tube Heat Exchanger

The waterside efficient shell and internal thread heat exchanger is of helical baffle type, with better heat transfer performance and higher resistance to freezing than plate heat exchanger, lower water resistance and lower requirements for water quality.

Saw-shaped Impeller

Compared to plastic impellers, the saw-shaped impellers provide large air volume, high durability and high air supply efficiency with low noise.

High Precision Electronic Expansion Valve

The electronic expansion valve achieves 480 regulating range, supplemented by TICA's patented precision throttle control technology to realize dynamic matching in refrigerating system, fully improve the optimum efficiency of each component and ensure the optimum condition of system operation pressure and temperature.

Self-developed Microcomputer Control Panel

TCA control panel is fully upgraded based on original control panels with years of experience in R&D and design, which combines more functions including phase sequence detection, current detection, RS-485 communication interface, delivering stronger performance, utility, standardization, convenience and universality. The USB interface is also provided to facilitate later-stage maintenance and upgrade of control function. The panel is supplemented by TICA developed control program which offers full operation control and multiple safety protection functions.

Multiple Protection Functions, Providing Safety And Stability

The unit has multiple safety protection functions which ensure safety and stable operation of the unit and systems. The water flow switch and multiple anti-freezing program designs protect the unit and systems in an all-round way.

Note:

- The nominal cooling capacity and nominal cooling input power are tested at the rated water flow, water outlet temperature of 7°C, and outdoor dry-bulb temperature of 35°C.
The nominal heating capacity is tested at the rated water flow, water outlet temperature of 45°C, outdoor dry-bulb temperature of 7°C or outdoor wet-bulb temperature of 6°C.
- The operating range is 5°C to 48°C for cooling and -15°C to 48°C for heating. If the unit needs to run in cooling mode at an ambient temperature lower than 5°C, please contact TICA factory.
- As a separate item, control accessory box contains a wired controller, a wired controller communication cable, user manual, and temperature sensor. The configuration is subject to changes, so please refer to actual unit upon delivery.
- The specifications above are based on a single module. Multiple modules can be used in combination. A maximum of 16 modules can be combined.
- About 6% loss caused by system pipelines, water pumps, valves, and dirt after unit installation shall be considered for the cooling (heating) capacity in actual application.

Total Heat Recovery Modular Unit (TCA-XHR/1)

TICA's total heat recovery modular air-cooled chiller (heat pump) unit uses the environment-friendly refrigerant R410A and combines the features of TICA air-cooled chiller (heat pump) unit and air-source heat pump water heater unit. It has five modes: A/C cooling, A/C heating, heat recovery, heat pump water heating, A/C heating + heat pump water heating, widely applied in places requiring central air conditioning and water heating, such as hotels, schools, restaurants, hospitals, villas, bath centers.

Free Domestic Hot Water

In the A/C cooling mode, the unit can recover waste heat and provide free domestic hot water up to 55°C. The unit replaces the boiler to meet the user needs for hot water, saves initial investment, eliminates the need for machine room, and saves the building area and energy for environmental protection.

Footprint

A single module covers a floor area of only 1.89 m² which is the smallest in the industry, leaving larger valuable space for customers. The unit can substitute the boiler, eliminates the need for machine room, and saves initial investment and building area.

Complete Functions

The compact structural design does not impair strong functions and five modes are more widely applied, including refrigeration, heating, heat recovery, heat pump water heating, A/C heating + heat pump water heating.

Efficient Components Providing Higher Efficiency

The unit employs efficient shell and tube heat exchanger, fan, and heat recovery unit, with optimized pipeline design, providing comprehensive energy efficiency up to 8.24 under conditions of cooling + heat recovery.

Total Heat Recovery Operation Mode

The full heat recovery air-cooled chiller uses R410A refrigerant and combines the characteristics of the Tianjia modular unit and the air source heat pump hot water unit, including five modes: Cooling mode, Heating mode, Cooling + DHW, Domestic Hot water, Heating + DHW, Used in hotels, schools, restaurants, hospitals, villas, bathing centers and other places that need to provide air conditioning and hot water.

Green Technology

Refrigeration total heat recovery is to use 100% of the heat of the condenser in the refrigeration cycle to prepare hot water, realize the reuse of waste heat, reduce the thermal pollution caused by the condensation heat to the environment, and reduce the power consumption of the cooling fan and the noise of the unit. In addition, this chiller can run the heat pump hot water mode alone in winter, and it can meet the demand for hot water in winter without adding other hot water equipment, which greatly reduces the initial investment of engineering equipment.

High efficiency heat exchanger

five advantages:

- 1) High heat exchange efficiency (using high-efficiency finned heat exchange tubes and spiral coil tube structure);
- 2) Small size, saving installation space;
- 3) Excellent water quality (water pipes are made of pure copper);
- 4) Strong frost resistance (large cross-sectional area of water circulation, not easy to block and freeze crack);
- 5) Stable and reliable (no solder joints in the internal copper pipe, no risk of solder leakage);

Modular Fixed Frequency Air-cooled Scroll Chiller

★ Note:

- Cooling mode: Nominal cooling operating conditions: water flow volume 11.4m³/h, chilled water outlet temperature 7°C, ambient temperature 35°C
Nominal heating operating conditions: water flow 11.4m³/h, hot water outlet temperature 45°C, ambient dry/wet bulb temperature 7°C/6°C.
- Heating water mode: Nominal conditions: water flow volume 13.1m³/h, hot water outlet temperature 45°C, ambient dry/wet bulb temperature 20/15°C.
- Cooling + heat recovery mode: Cooling mode cooling water flow volume 10.3m³/h, LWT 7°C, heat recovery mode: hot water water flow volume 13.1m³/h, hot water outlet temperature 45°C
- Nominal heating operating conditions: initial water temperature 15°C, cadence water temperature 55°C, ambient dry/wet bulb temperature 20/15°C.
- In actual use, the cooling/heating loss should be considered after the installation of the system piping, pumps, valve, dirt, etc. about 6%.
- The units can be combined freely. Each system can combine up to 16 modules.
- There will be no further notice if the parameters changes due to product optimization.
- The controllers need to be ordered separately, including wired controller, communication line, IOM, temperature sensor. Manufacturer reserves the right to make changes to above specifications without prior notice, please refer to the factory configuration when purchasing.

4-Pipe Modular Chiller(TCA-XHF)

The 4-pipe modular air-cooled chiller (heat pump) adopts R410A eco-friendly refrigerant, and supports cooling, heating, and cooling heat recovery operations. It is widely applied in places with higher requirements for temperature and humidity, such as hospitals, art galleries, and equipment rooms. When cold water is used for dehumidification, re-heating is obtained free of charge. The unit can also be applied in building complexes which require both cooling and heating, to greatly save operating cost and initial investment in equipment. Without the need for a dedicated equipment room and cooling tower, the 4-pipe modular air-cooled chiller (heat pump) unit is the best choice in prosperous areas and the water shortage areas.

Maximized Energy Utilization

In places where both cooling and heating are required and specific temperature and humidity limits are set, separate configuration for cooling and heating is not required. The waste heat emitted during cooling can be recovered for producing hot water, which will be used by air side products. The ICOP can reach up to 7.78, substantially reducing initial investment and later-phase operating costs.

Auto Balance of Cooling and Heating

With a modular design and self-adapting cooling and heat balancing technologies, the unit can automatically adjust the output of cooling and heating capacity based on actual conditions, and fast switch the operating status and control the water outlet temperature to achieve continuous balancing that enables "output on demand". Both temperature and humidity are controlled more accurately to provide enhanced comfort.

Wide Operation Range

The unit adopts well-known multi-speed fans to further reduce operation noise and implement smart air flow adjustment, so as to support stable cooling and heating within a wide range of -15°C to +48°C.

★ Remarks:

- The nominal cooling capacity is tested under the following conditions: water flow of 11.4 m³/h; water outlet temperature of 7°C; outdoor environment DB temperature of 35°C.
The nominal heating capacity is tested under the following conditions: water flow of 13.9 m³/h; water outlet temperature of 45°C; outdoor environment DB/WB temperature of 7°C/6°C.
- The nominal cooling+heating capacity is tested under the following conditions: water flow at cold water side of 11.4 m³/h; water outlet temperature of 7°C; water flow at hot water side of 13.9 m³/h; water outlet temperature of 45°C.
- The operation range in cooling mode, heating mode, and cooling+heating mode is -15°C to +48°C.
- About 6% loss caused by system pipelines, water pumps, valves, and dirt after unit installation shall be considered for the cooling (heating) capacity in actual applications.
- Parameters listed in the above tables are for a single module. Up to 16 modules can be used together.
- The specifications are subject to change due to product improvement without prior notice.
- The control accessory box needs to be purchased separately, which contains the wired controller, wired controller communication cable, user manual, temperature sensor, etc. The box content may change. Please refer to the actual factory configurations.

High-Heat Efficiency Modular Chiller(TCA-XHE)

The unit is designed with TICA's experience in R&D of modular unit, featuring the most advanced EVI compressor from EMERSON and applicable for a wider range of heating.

Widely Operation Range Of Heating

The advanced EVI compressor technology is adopted for twostage compression, wider operation range of efficient heating at ambient temperature of $-25^{\circ}\text{C}\sim 25^{\circ}\text{C}$ to satisfy a wider range of requirements.

Precision Throttle Control Technology Of Electronic EXV

The electronic expansion valve achieves 480 regulating range, supplemented by TICA's patented precision throttle control technology to realize dynamic matching in refrigerating system, fully improve the optimum efficiency of each component and ensure the optimum condition of system operation pressure and temperature.

EVI Compressor

The high-heat efficiency modular unit employs the efficient EVI technology, with a secondary suction port fitted on the scroll plate. The refrigerant volume is increased through the secondary suction loop and the enthalpy difference of refrigerant in the major cycle is increased to improve the efficiency of cooling and heating.

Low Carbon And Environmental Protection

The unit uses the environment-friendly refrigerant R410A, and combines air source heat pump and EVI technologies. It can be used in the northern area for cooling in summer and heat pump heating in winter, providing lower-carbon and more environment-friendly applications.

Specifications - High-heat Efficiency Type (TCA-XHE)
380V-3N-50Hz

Model			TCA201XHE	TCA401XHE
Power supply		V-ph-Hz	380-3-50	380-3-50
Cooling	Cooling capacity	kW	70	150
	Cooling power input	kW	20.4	43.8
	Cooling current	A	41.4	77.5
Heating	Heating capacity	kW	78	160
	Heating power input	kW	20.8	44
	Heating current	A	41.3	78.3
Maximum power input		kW	31	58
Maximum input current		A	60	105
Starting current		A	126.6	260.2
Energy regulation		%	0-50-100	0-50-100
Compressor	Type	-	Hermetic EVI scroll compressor	
	Brand	-	Emerson	Emerson
	Qty	-	2	2
Evaporator	Type	-	High-efficiency shell-and-tube heat exchanger	
	Water flow	m ³ /h	12	25.8
	Water pressure drop	kPa	50	54
	Connection pipe dimension	-	DN65 flange connection	DN80 flange connection
Fan	Qty	-	2	4
	Air flow	m ³ /h	30000	60000
	Current	A	2.6	2.6
	Power	kW	0.9	0.9
Unit dimensions (L*W*H)		mm	2200x860x2190	2200x1720x2190
Packaging dimensions (L*W*H)		mm	2260x920x2190	2260x1780x2190
Net weight		kg	665	1150
Operating weight		kg	710	1250
Refrigerant	Type	-	R410A	R410A

★ Notes:

1. Nominal cooling operating conditions: leaving water temperature 7°C, ambient temperature 35°C; Nominal heating operating conditions: leaving water temperature 45°C, outdoor dry bulb temperature 7°C, wet bulb temperature 6°C;
2. In actual use, the cooling/heating loss should be considered after the installation of the system piping, pumps, valve, dirt, etc. about 6%;
3. For other working conditions or capacity parameters, Please contact TICA offices for cooling ambient condition under 5°C;
4. There will be no further notice if the parameters changes due to product optimization.
5. The units can be combined freely. Each system can combine up to 12 modules.
6. The controllers need to be ordered separately, including wired controller, communication line, IOM, temperature sensor. Manufacturer reserves the right to make changes to above specifications without prior notice, please refer to the factory configuration when purchasing.

Year-round Cooling modular Chiller(TCA-XHA)

TICA's new generation of year-round cooling modular unit is applicable for industrial applications, and requirements on energy saving and environment protection. It can operate for refrigeration at the ambient temperature of $-10^{\circ}\text{C} \sim 48^{\circ}\text{C}$ all the year round, with environment-friendly refrigerant R410A, advanced electronic expansion valve control technology, efficient shell and tube heat exchanger, EC fan with stepless speed regulation, fully meeting the requirements of various industry applications for chilled water throughout the year.

Widely Operation Range Of Cooling

The modular water chiller unit is specially designed and can run in all weathers at the ambient temperature of $-10^{\circ}\text{C} \sim 48^{\circ}\text{C}$.

DC Fan With Stepless Speed Regulation

The condensate fan employs the DC brushless motor of which the speed is variable between 20%-100% to ensure that condensing pressure is within the range of safe operation under all conditions for longer service life.

High Precision Electronic Expansion Valve

The electronic expansion valve achieves 480 regulating range, supplemented by TICA's patented precision throttle control technology to realize dynamic matching in refrigerating system, fully improve the optimum efficiency of each component and ensure the optimum condition of system operation pressure and temperature.

Dry-type Shell And Tube Heat Exchanger

The unit employs efficient dry-type heat exchanger as the waterside heat exchanger which has excellent anti-freezing performance and higher tolerance to impurities in water system, ensuring more reliable and stable operation of the unit.

Modular Fixed Frequency Air-cooled Scroll Chiller

Specification(Year-round Cooling)

Specifications - Year-round Cooling Type (TCA-XHA)
380V-3N-50Hz

Large Air-cooled Scroll Chiller

Model Nomenclature

Features

Environmental friendly

TICA air cooled scroll chiller (heat pump) uses eco-friendly refrigerant R410A. Such chlorine-free refrigerant does not harm the ozone layer (zero-ODP), and is stable and non-toxic. Therefore, it is environmental friendly and is unlikely to be replaced. In addition, it is good in heat exchanging, which could help boost the unit performance and lower energy consumption.

High-end configuration

Efficient flexible scroll compressor

The unit uses the well-known hermetic efficient scroll compressor and the optimized scroll and sealing ring so that the refrigerant compressor features axial and radial flexibility. This not only effectively reduces refrigerant leakage, but also raises the volumetric efficiency of the compressor. Moreover, each compressor is equipped with a unidirectional discharge valve to avoid backflow of the refrigerant and ensure that the compressor can run stably in the full operating condition.

High-precision electronic expansion valve

The unit adopts the 480-step electronic expansion valve of premium brand (for total heat recovery: 500 steps) for precise adjustment of refrigerant flow. And with TICA's patented control technology, refrigerant in the system is dynamically adjusted to suit the load demands in a fast and accurate way, to greatly improve the unit energy efficiency. (Patent No.: ZL 2013 2 0345187.X)

Efficient water-side shell-and-tube heat exchanger

The water-side heat exchanger employs the efficient shell-and-tube heat exchanger. Compared with the plate heat exchanger, the shell-and-tube heat exchanger provides wider water-side channels and produces less water resistance and scale, with less possibility of being blocked by impurity. Therefore, the shell-and-tube heat exchanger raises lower requirements for water quality and is equipped with more powerful anti-freezing capability.

The unit uses the well-known hermetic efficient scroll compressor and the optimized scroll and sealing ring so that the refrigerant compressor features axial and radial flexibility. This not only effectively reduces refrigerant leakage, but also raises the volumetric efficiency of the compressor. Moreover, each compressor is equipped with a unidirectional discharge valve to avoid backflow of the refrigerant and ensure that the compressor can run stably in the full operating condition.

High-performance fan

The air cooled scroll chiller (heat pump) is installed with IP54-rated (or higher) fan motor, to ensure safe and reliable running in the most severe weather conditions..

Anti-dust

Water-proof

Professional design

Unique energy regulation

When TICA air cooled scroll chiller (heat pump) is deployed in a modular system, the energy control part employs TICA's patented smart energy regulation technology, and based on which, the first system of each modular unit is loaded before loading the corresponding second system. In this way, the inlet and outlet water temperature difference of the modular unit at part load can be effectively balanced with less water temperature fluctuation, to raise the energy efficiency ratio of the modular unit at part load and enhance the anti-freezing capability of the water-side heat exchanger in winter, making the multi-modular unit a compact and easy-to-use system that features high efficiency and automatic energy regulation. (Patent No.: ZL 2013 2 0344732.3)

Smart air flow regulation

With the common air system, the new-generation air cooled scroll chiller (heat pump) implements hierarchical control of fans. The unit with a single module can automatically adjust the number of active fans based on the ambient temperature so that the air flow change of the unit best matches the load change without frequently powering on or off fans. Therefore, the pressure of the system is stable with small water temperature fluctuation and the modular unit can run more reliably. Moreover, the common air system and hierarchical fan control design greatly increases the temperature ranges of the unit in cooling and heating modes.

High efficiency & energy saving

According to the national authoritative detection institute, the EER of TICA air cooled scroll chiller (heat pump) at full load is greater than 3.3, reaching and exceeding national grade 2 energy efficiency standard. TICA air cooled scroll chiller (heat pump) has achieved the Energy Conservation Certification issued by the authoritative detection institute certified by China National Accreditation Service for Conformity Assessment (CNAS), and has been included into the energy-saving product procurement list of China.

The whole unit adopts air-cooled mode without the need of large external equipment such as boiler and cooling tower, thereby reducing initial investment and OPEX of users. TICA air cooled chiller (heat pump) efficiently saves energy, having safe and eco-friendly characteristics.

Reliable running

Three guarantee

With three patented technologies resolving specific problems, the defrosting feature of air cooled scroll chiller (heat pump) is further improved to guarantee efficient defrosting in winter and excellent heating capacity of the unit.

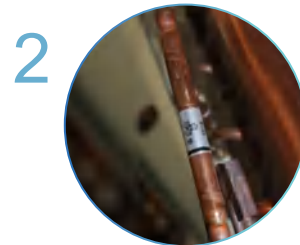

First guarantee

With the patented defrosting technology, the system determines the defrosting conditions according to the ambient temperature, evaporation temperature, and running time in heating mode. Meanwhile, the patented defrosting technology ensures that the unit can be efficiently defrosted when there is frost, and stably supply heat when there is no frost. The running efficiency of the unit in heating mode is more than 90%. The EER in heating mode significantly increases.

Second guarantee

The patented unidirectional valve technology refers to deploying a unidirectional valve at the last refrigerant loop at the bottom of the heat exchanger to prevent the refrigerant at low temperature in heating mode from entering the last loop at the bottom, without blocking the flow of the refrigerant at high temperature during defrosting. This technology not only prevents frost, but also greatly reduces the risk of being frosted and frozen at the bottom.

Third guarantee

The suspended bottom design refers to reserving space between the bottom of the fin heat exchanger and the horizontal plate sheet without affecting water flow after defrosting. Therefore, water can more easily drain and the possibility of water accumulation and freezing is reduced.

Improved protection functions

The unit programs have multiple protection functions to guarantee stable and reliable running. TICA air cooled scroll chiller (heat pump) is equipped with a water flow switch, which does not need to be installed and debugged during installation. This makes the unit running safer, simplifies the installation process, and reduces the costs, thus providing a cost-effective and convenient solution to customers.

Communication failure protection	Sensor fault protection
Protection of too high air discharge temperature	Frequent startup protection
Compressor high-current protection	Balancing wear during hardware usage
Compressor low-current protection	High pressure protection
Protection of too low outlet water temperature	Low voltage protection
Protection of too high outlet water temperature	Fan overload protection
Phase sequence protection	Protection against insufficient water flow
Automatic anti-freezing protection	External interlocking protection

Intelligent control

Microcomputer control system

Air cooled scroll chiller (heat pump) employs the third-generation microcomputer control system and wired controllers that are upgraded. The third-generation microcomputer control panel integrates phase sequence detection and current detection features and provides more USB ports to facilitate subsequent maintenance and upgrade of TICA self-developed control program.

Moreover, the unit supports modular control, and up to 8 modules can be combined in parallel mode. When the unit is deployed in a modular system, the master and slave units can be set on demand. A faulty master unit can be easily replaced without affecting monitoring and running of the entire system.

Diversified control functions

Circulating water pump interlocking + Auxiliary electric heater interlocking + Fan coil interlocking

The control panel of the unit reserves the water pump interlocking control interface, auxiliary electric heater interlocking control interface, and the external interlocking interface. The unit supports interlocking control of the master water pump to prevent the unit from being damaged due to asynchronous startup of the water pump and unit. In winter, when the unit runs in heating mode, the switch of the auxiliary electric heater is controlled based on the load demand and the unit running status. The unit supports interlocking control of fan coil, controls unit power-on/power-off and loading/unloading according to the usage of the air side devices, thus enabling automatic running.

Remote power-on/power-off/mode switchover + Remote centralized control + Building automatic control

The control panel of the unit reserves the remote wired control switch/mode switchover interlocking interface. By adjusting the DIP switch, enable remote power-on/power-off/mode switchover. The reserved remote communication interface of the unit helps enable remote monitoring of the unit running and switch control. The unit is equipped with an RS485 communication interface that supports Modbus protocol. The unit supports building automatic control (BAS) system to enable centralized control and smart management of multiple modules.

User-friendly control

The unit is equipped with a perfect control program, providing the following functions: balanced running of the compressor, standby operation, smart anti-freezing running, manual defrosting, automatic fault judgment, automatic fault handling, and automatic alarm display. Additionally, the control part can use a multi-functional centralized controller (with keys/7" touch screen). The centralized controller can be customized to provide multiple functions, such as scheduled power-on/power-off, running on weekends/in holidays, memory upon power-off, and multi-level passwords.

★ Remarks:

- The nominal cooling capacity and nominal cooling input power are tested at the rated water flow, water outlet temperature of 7°C, and outdoor dry-bulb temperature of 35°C.
The nominal heating capacity is tested at the rated water flow, water outlet temperature of 45°C, outdoor dry-bulb temperature of 7°C or outdoor wet-bulb temperature of 6°C.
- About 6% loss caused by system pipelines, water pumps, valves, and dirt after unit installation shall be considered for the cooling (heating) capacity in actual application.
- The operating range is 5°C to 48°C for cooling and -15°C to 48°C for heating. If the unit needs to run in cooling mode at an ambient temperature lower than 5°C, please contact TICA factory.
- The specifications above are based on a single module. Multiple modules can be used in combination. A maximum of 8 modules can be combined.
- As a separate item, control accessory box contains a wired controller, a wired controller communication cable, user manual, and temperature sensor. The configuration is subject to changes, so please refer to actual unit upon delivery.

Water Scroll Chiller

Nomenclature

TWS 20 M D C 4

TICA environment-friendly water-cooled scroll-type TWS series specially recommended for small-to-mid-sized buildings

For customers, the product is featured by...

High efficiency & energy saving

- High EER, higher energy efficiency at partial load, saving the operation cost for the user.
- Due to modular operation, hierarchical startup saves energy

Healthy and comfortable

- The unit adopts the world-renowned hermetic scroll compressor, which runs quietly with low vibration.
- The unit can quickly and accurately meet the requirements of the user thanks to its superior control and powerful operation of the compressor.

Reliable and stable

- The modular design allows starting the units in a hierarchical way, reducing the impact of the startup current on the power grid.
- The unit is equipped with a variety of protection functions to ensure safe operation.
- The designed service life is long, protecting customer's investment.

Flexible and user-friendly

- Units can be purchased and installed by stages according to the actual need; thanks to the compact structure, the units do not need a special equipment room and can be installed on rooftop.
- The modular structure facilitates maintenance. Units are not affected when one unit is repaired or maintained.
- Units can be controlled in a centralized manner to facilitate routine management. The operation interface is user-friendly and meets various needs.

For designing institutes and installation, the product is featured by...

Environmental-friendly

- The unit adopts the environmental-friendly refrigerant HFC-410A, which is safe for the ozone layer and not subject to any restriction for use. It is highly appealing to designers advocating environmental protection.
- Outstanding cooling performance, low power consumption, low emission of CO2 emissions.

Easy unit selection

- The unit has three basic unit modules: 20RT, 30RT and 40RT, which can serve as an arbitrary combination of the master unit and the slave units. At most 12 units can be combined with a combined capacity of 20RT to 480RT at an interval of 10RT, facilitating the selection of units.

Easy handling

- The modules can be handled by elevator or forklift. No professional hoist is needed, thus saving the hoisting and labor costs.

Convenient Installation

- The unit can be transported separately, combined and installed conveniently and simply, thus shortening the installation period.

Performance Characteristics

High Efficiency & Energy Saving

■ Compressor

The units adopt the high-efficiency scroll compressors from a world-famous manufacturer. The compressor is featured by a small clearance capacity, small friction loss and high operation efficiency. Each modular unit is equipped with two scroll compressors. The combination of multiple modules provides multi-level capacity regulation, which is more energy efficient under operation with partial load.

■ Condenser and evaporator

It adopts the high-efficiency shell-and-tube heat exchanger with high-efficiency inner grooved copper tube, which improves the heat exchange efficiency; the heat exchange area is increased to lower the heat exchange temperature difference and improve the unit's COP; the condenser is equipped with a supercooling section at the bottom to effectively improve the supercooling of the refrigerant liquid; the modern manufacturing process and technologies ensure that the container is clean and free of impurities, thus improving the heat exchange efficiency; the heat exchanger undergoes strict flaw detection test and pressure inspection to ensure safety and reliability.

■ Cooling accessories

The expansion valve and protection control components all come from world-renown suppliers with reliable quality, ensuring that the unit can operate under high efficiency for a long time.

■ Low operation noise

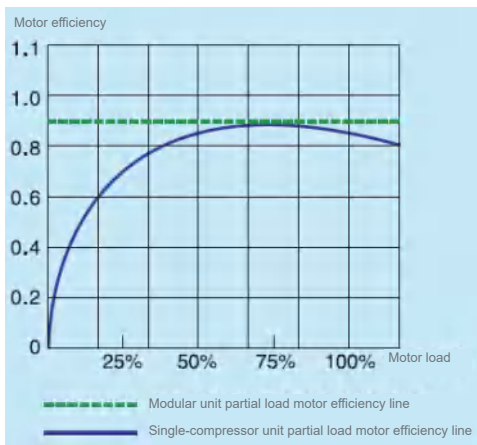

The unit has outstanding configuration and optimized design. Components are carefully compared, selected and optimized; the structure and pipeline are optimized to lower the noise. The unit has undergone the noise test in a precision noise lab.

- Hermetic scroll compressor with small vibration from a world-famous supplier;
- Flexible installation base for the compressor, minimizing the vibration of the compressor;
- Optimized air suction and discharge pipelines, reducing the vibration of the unit.

■ The modular structure improves the power efficiency of the unit

Each module unit provides 2 energy regulation levels. Modules combined provide more energy regulation levels;
 The intelligent compressor operation balancing technology elevates the efficiency of the compressor with low load and saves energy for continuous operation;
 When one compressor fails, the failure has no impact on the other units;
 The modules can be combined in various ways and operate independently.

Recommended combination way

■ Multiple protection functions

The stability of air conditioner is very important for industrial and commercial users. TICA environmental-friendly water-cooled scroll chiller (heat pump) has been tested for a long time under conditions stricter than the national standard. The test result outperforms the national standard. The unit provides multiple protection technologies to ensure the normal operation, a long service life and safety of the unit.

- Phase sequence protection
- Frequent startup protection of the compressor
- Compressor overload protection
- Discharge temperature protection
- High and low pressure protection
- Disconnection protection
- Automatic freezing protection
- Automatic alarm and reset for some faults
- Automatic loading and unloading
- Powerful external interlocking

Intelligent Control

The unit is equipped with a user-friendly operation interface to meet various operational requirements of customers. The unit is equipped with microcomputer monitoring, which can realize various functions such as temperature control, time setting, memory, status display, alarm display, temperature setting and group control. The user can use its own control switch to control the unit and use external switches to realize remote control.

■ Alarm and protection functions

- 17 protection and fault protection functions
- Button lock
- Password protection parameter setting

■ Parameter setting functions

- Real-time settings
- Timed power-on/off setting
- Cooling water inlet/outlet temperature setting
- Heating water inlet/outlet temperature setting

■ Basic operation functions

- Cooling mode
- Heating mode

■ Other functions

- Historical failure check
- Remote control on/off
- The battery supports running of the real-time clock upon power-off

■ Intelligent control of signal output

- Cooling water pump control output
- Chilled water pump control output

■ Parameter display function

- Operating status check
- Compressor operation status display
- Chilled water temperature display
- Hot water temperature display
- Water pump operation status display
- Freezing protection display
- Communication indicator
- Displaying information under multi-color backlight
- Error code

Standard Duct -TCR

1. Different ESP for option

12Pa,30Pa,50Pa is standard,and 80Pa can be customized.

2. Multiple coils design

Two-pipe system (3 rows) and four-pipe system (3+1) are available.

3. Return air purifiers as optional to make environment clean

Operating principles:

The pre-filter layer removes hair, dust, and large particles from the air; the professional PM2.5 filter layer adopts the unique electrostatic technology to remove PM2.5 from the air through physical adsorption measures, without causing ozone hazard; the capture agent on the formaldehyde filter surface shows a formaldehyde removal capacity more powerful than that of the traditional activated carbon net, and converts the formaldehyde in air into a kind of safe and harmless substance through chemical reaction, instead of releasing it into the room with air and without leading to secondary pollution because of filtration adsorption and heating.

★ Note:

- Cooling: supply water and return water temperatures 7/12°C; the dry/wet bulb temperature of air inlet is 27/19.5°C;
- Heating: supply water is 60°C or 45°C, water quantity being the same as during cooling; air return conditions: the dry bulb temperature of air inlet is 21°C;
- In the table, low static pressure indicates the air outlet static pressure at 0Pa (with air outlet and filter) and at 12Pa (without air outlet and filter);
- The air flow in the table is obtained when the unit is running in dry state and the dry bulb temperature of air inlet is 20°C;
- Left & right swing manner can be adjusted on site. After adjustment, the cooling capacity and heating capacity should be multiplied by the correction factor 0.9;

Net weight	Air Return Plenum (Excluded) (kg)	10.5	12.5	14.5	16	17	18.5	22	25	30	31.5	
	Air Return Plenum (Included) (kg)	12.5	15.5	17.5	19	20	22.5	26	29	36	37.5	

★ Note:

- Cooling: supply water and return water temperatures 5/13°C; the dry/wet bulb temperature of air inlet is 27/19.5°C;
- Heating: supply water is 60°C or 45°C, water quantity being the same as during cooling; air return conditions: the dry bulb temperature of air inlet is 21°C;
- In the table, low static pressure indicates the air outlet static pressure at 0Pa (with air outlet and filter) and at 12Pa (without air outlet and filter);
- The air flow in the table is obtained when the unit is running in dry state and the dry bulb temperature of air inlet is 20°C;
- Left & right swing manner can be adjusted on site. After adjustment, the cooling capacity and heating capacity should be multiplied by the correction factor 0.9;

★ Note:

- The air return plenum unit with a filter screen does not have an air return flange only, with other dimensions remaining the same.
- When vibration-absorbing lifting hooks are used for lifting the unit, tell the factory about it.

DC Brushless FCU-TCR-R

★ Note:

1. Facing the air outlet of the unit, the inlet and outlet water pipe in left is the left type , and right type on the contrary
2. 30Pa is standard,and 12Pa、50Pa can be adjusted on site.

1. Compact, Light, Flexible and Elegant

The product is compact in structure, with depth as low as 470 mm and thickness as low as 230 mm. It is especially suitable for restricted ceiling space and can save building floor height.

2. Highly Efficient and Eco-Friendly

Highly efficient brushless DC motor is used with low wind resistance energy-saving heat exchanger to achieve higher efficiency. During operation, the energy consumption can be greatly saved during low load period through stepless regulation of speed.

3. Low Noise, Exceptional Comfort

The motor features UHF drive emitting only very low noise, and the fan adopts large impeller achieving low speed. Selected noise insulation materials are used with unique intelligent mute control logic, so that the operating noise can be as low as 20 dB (A).

4. Safe and Reliable Drainage Pan

The pan is formed using one-off processing technology without any welds and processed with anti-corrosion treatment; The thermal insulation material at the bottom has no joint and no condensation problem. The fire protection rating is non-flammable, so it is safe to use.

5. Simple Electronic Control Configuration

Easy to operate, four-speed flexible wind control (high, medium, low, mute), and intelligent stepless regulation in auto-speed mode.

6. Convenient Installation

The product can be selected as left type or right type, and the type can be adjusted at the installation site; The air return type can be selected as back return or bottom return, and the air return direction can be switched at the installation site.

7. Various External Static Pressures

The user can quickly convert among external static pressures 12Pa, 30Pa and 50Pa through a DIP switch at the installation site to meet different applications.

8. Network Intelligent Temperature Control

Equipped with RS485 interface, and supporting Modbus communication protocol, this air conditioner can be connected to automatic control system of the building for centralized management to realize functions such as remote power on/off, mode setting, and operation monitoring for convenient operation management and energy saving.

- Black or white optional
- Electric valve and fan controllable
- Temperature sensor built-in to display the indoor temperature
- Both 2-pipe and 4-pipe models applicable
- Embedded functions such as child lock, power-off memory, anti-freeze protection, and sleep mode.

★ Note:

1. Cooling: supply water and return water temperatures 7/12°C; the dry/wet bulb temperature of air inlet is 27/19.5°C;
2. Heating: supply water is 60°C or 45°C, water quantity being the same as during cooling; air return conditions: the dry bulb temperature of air inlet is 21°C;
3. In the table, low static pressure indicates the air outlet static pressure at 0Pa (with air outlet and filter) and at 12Pa (without air outlet and filter);
4. The air flow in the table is obtained when the unit is running in dry state and the dry bulb temperature of air inlet is 20°C;
5. The noise in the table is measured in a semi-anechoic chamber with background noise of 11.5dB(A).
6. Left & right swing manner can be adjusted on site. After adjustment, the cooling capacity and heating capacity should be multiplied by the correction factor 0.9;
7. Specifications are subject to change without notice due to product improvement, please refer to the nameplate of the unit.

★ Note:

1. Cooling: supply water and return water temperatures 7/12°C; the dry/wet bulb temperature of air inlet is 27/19.5°C;
2. Heating: supply water is 60°C or 50°C; air return conditions: the dry bulb temperature of air inlet is 21°C;
3. In the table, low static pressure indicates the air outlet static pressure at 0Pa (with air outlet and filter) and at 12Pa (without air outlet and filter);
4. The air flow in the table is obtained when the unit is running in dry state and the dry bulb temperature of air inlet is 20°C;
5. The noise in the table is measured in a semi-anechoic chamber with background noise of 11.5dB(A).
6. 4-pipes units, 3 rows are cooling coil, and 1 row is heating coil.
7. Specifications are subject to change without notice due to product improvement, please refer to the nameplate of the unit.

Note:

- Cooling capacity test conditions: supply water and return water temperatures 7/12°C; air return conditions: the dry/wet bulb temperature of air inlet is 27°C;
- Heating capacity test conditions: supply water is 60°C, water quantity being the same as during cooling capacity test; air return conditions: the dry bulb temperature of air inlet is 21°C;
- The air flow in the table is obtained when the unit is running in dry state and the dry bulb temperature is 20°C;
- When FCU residual pressure consumption is 80Pa, moisture might occur;
- Unless specified otherwise, the unit comes with the following return air plenum;
- The sound pressure level in the table is obtained in a semi-anechoic chamber with noise at 11.5dB(A);

Round Flow Cassette - TKM

Characteristics:

- 360° air outlet, no blind spot.
- Low noise
The quality heat insulating and anechoic material is used to minimize the unit vibration and noise. The 3D aerofoil-type blade fan with a large diameter is used to ensure low speed and low noise.
- Compact design, built-in drain pump
